

Introduction to Astrotheology

Santos Bonacci & Johan Oldenkamp

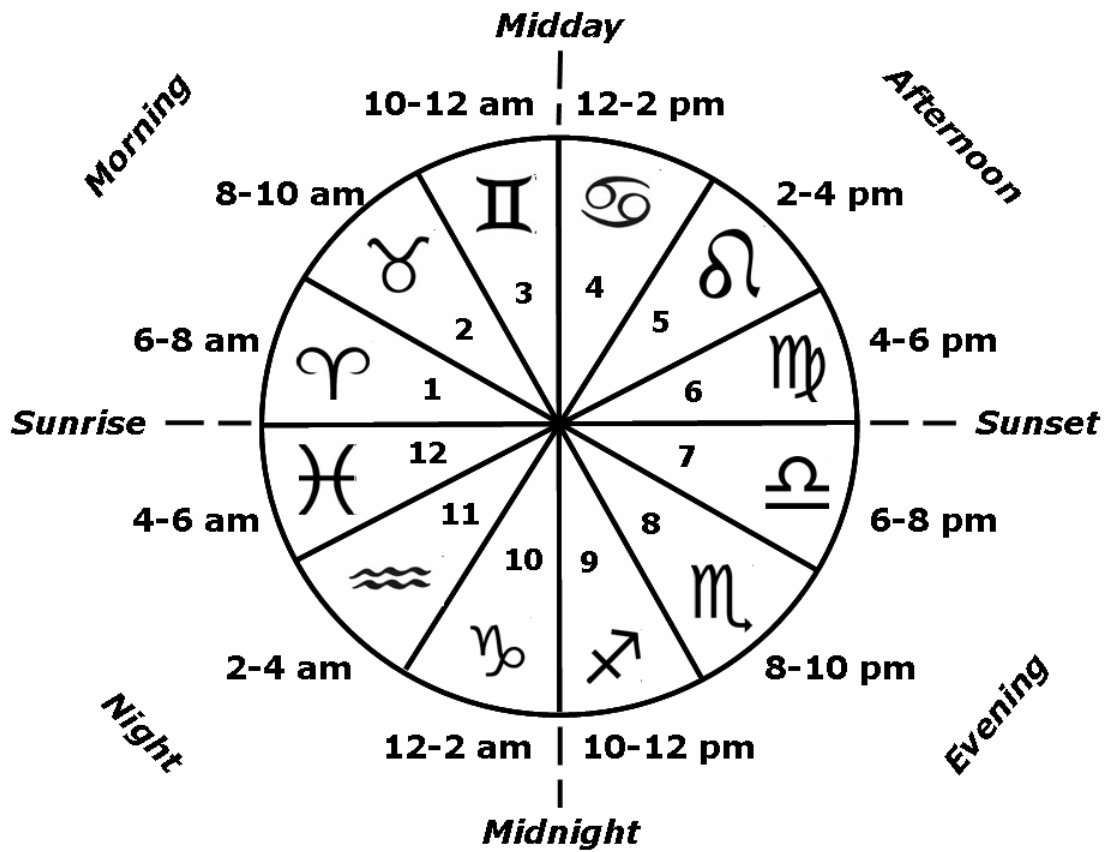

The table below shows the bodily locations of common diseases, based on the moment of birth. This relation is based on the three *decanates* (or *decans* for short) per Zodiac sign. A decan is the division of the full period of a Zodiac sign (of 30 degrees of arc) into three equal periods (of 10 degrees of arc). Roughly, we can say that the people who were born on the day numbers of 21 and higher belong to the first decan. The second decan corresponds to the day numbers from 1 to 10. The remaining day numbers (11 up to 20) belong to the third decan. The table below shows the corresponding disease for each decan per Zodiac sign.

Zodiac Sign	Focus	1st Decan	2nd Decan	3rd Decan
<i>Aries</i>	Head	Skull	Migraine	Concentration
<i>Taurus</i>	Throat	Nose	Throat	Ears
<i>Gemini</i>	Arms	Smell	Lungs	Speak
<i>Cancer</i>	Chest	Skin	Body Fat	Touch
<i>Leo</i>	Heart	Heart	Blood	Circulation
<i>Virgo</i>	Belly	Appetite	Stomach	Digestion
<i>Libra</i>	Kidneys	Metabolism	Bowels	Excrement
<i>Scorpio</i>	Genitals	Sexuality	Genitals	Hormones
<i>Sagittarius</i>	Thighs	Farsightedness	Eyes	Nearsightedness
<i>Capricorn</i>	Knees	Spine	Bones	Joints
<i>Aquarius</i>	Ankle	Arms	Legs	Movement
<i>Pisces</i>	Feet	Concentration	Nerves	Reflexes

These 36 extra decans (on top of the 12 Zodiac signs) correspond to 36 extra constellations of stars. Please note that these 36 extra (astrological) constellations of stars are only visible from the northern hemisphere (in total, astrology distinguishes 88 different star constellations). The table above shows these 36 extra astrological constellations.
